Your Pet Does Not Need an Antibiotic Today!

Patient Name: __________________________  Date: ________________________________

Good news! Based on a complete examination and the history you provided, your pet does not need treatment with an antibiotic. Here are some other recommendations to help your pet feel better.

FINDINGS FROM TODAY’S VISIT:

☐ Diarrhea (lasts about 5–7 days)  ☐ Vomiting
☐ Cough (lasts about 7–10 days)  ☐ Nose discharge, with or without sneezing
☐ Cat urinary tract inflammation/cystitis (discomfort lasts about 3–5 days)  ☐ Other: ________________________________

Antibiotics will not help these conditions as they are not usually caused by bacteria. Sometimes bacteria do cause diarrhea, but most often it resolves on its own. Antibiotics should be used only when needed, because unneeded antibiotics can cause harmful side effects and promote antibiotic resistance.

HELP YOUR PET BY DOING THE FOLLOWING:

☐ Feed a bland diet. Recommended diet(s): ________________________________
☐ Ensure your pet drinks enough. Offer a few water sources, and wet the food.
☐ Warm up food to enhance its smell.
☐ To prevent sharing a viral infection, keep your pet away from other animals for _______ days.
☐ Limit exercise. Your pet needs to rest.
☐ Use a humidifier or place your pet in the bathroom (not the shower) and run hot water in the shower.
☐ Other: ________________________________

NON-ANTIBIOTIC MEDICATIONS:

☐ Prescribed today: ________________________________
☐ Recommended, if needed: ________________________________

FOLLOW-UP:

☐ Please call or visit the clinic if your pet is not better in ______ days, if your pet’s condition gets worse, or if you have other concerns.
☐ Recheck exam: __________________________  ☐ Clinic phone: __________________________
☐ Other: ________________________________
